Abstract

Nowadays the role of Information & communication Technology (ICT) especially Internet in the education sector plays an important role. This is an effective medium which is increasing the knowledge of teachers as well as students also. ICT is a part of improving meaningful content in education. Now days the role of ICT is increasing rapidly, it is influencing in education and all fields.

ROLE OF ICT

1) ICT can create balance in the education System:

ICT can create balance between rural & urban areas. Widely access of ICT can provide knowledge to them with all facilities of education. If both areas having electrical facilities, it gives equal knowledge to both education system.

2) Reoriented & formulated syllabus can fulfill the geographical needs:

ICT having the capacity to provide all types of syllabus according to the skills of manpower of every area. For example; in Adivasi area we can provide new knowledge of Farming in Forests by using ICT. So it's role of ICT to re-orient & formulate the syllabus of education.

3) Development of Distance Education:

ICT plays a vital role in Distance Education. Distance education/Correspondence education takes proper place due to ICT. Large no. of human resources in this country are not aware about the importance of the higher education, but, they have the capacity to take it & they deserve it. So, nowadays all types of universities providing external syllabus to the students who want to take higher education .So this is a major role of ICT to develop wide area of Distance Education.

4) Integration with International education:

This is one of the major issue in the world.Because of a vast difference between the foreign education & other country's education the employee are restricted knowledge of how to compete with the education system of another country. So, ICT is an effective medium to give equal base & give an equal opportunity to share each others quality of education

5) Multi Linguistic Generation:

It's the role of ICT to develop the people who are having knowledge of multi-language, which is useful in multi-cultural society. Nowadays, various institutions tries to give knowledge of major language of the world so, by using internet video-conferencing it is possible to resolve the problem of such society.

6) Ubiquitous learner :

Its role of ICT to create ubiquitous learner for better teaching learning process. In this days people having large facilities of communicate to each other. so anytime and anywhere learner can take knowledge of any subject. ICT should create the learner who have multi-skill knowledge.

CLOSURE

From above all the discussions, we can conclude that the role of ICT in education is definitely widely spread. The only need is that, we should create proper bridge in between Education & ICT for better teaching learning process.Government should try to give policy like providing Tab to all the students to empower education through use of ICT. This is how our education system can compete with the other education systems.
